- **From competent and reliable partner**
 - Good references and proven track record
 - Profitable business since 1993
 - Mobile products and services are our core business

Samsung Behold

HTC Hero

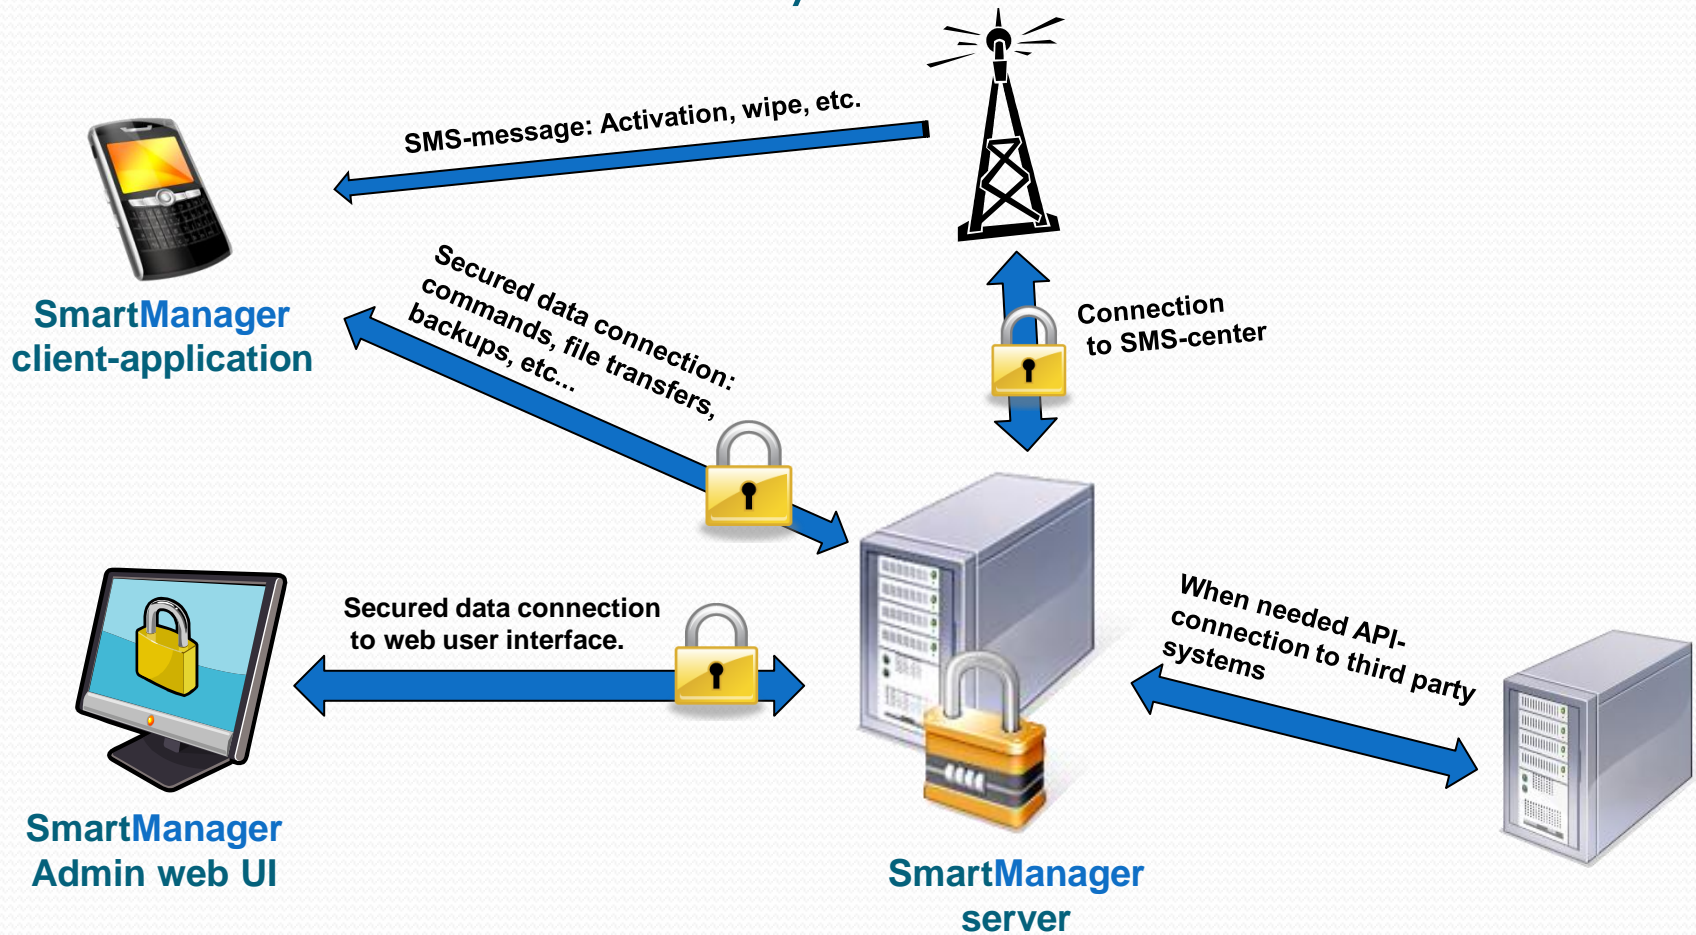

Nokia E75

Nokia 6760

How it works technically

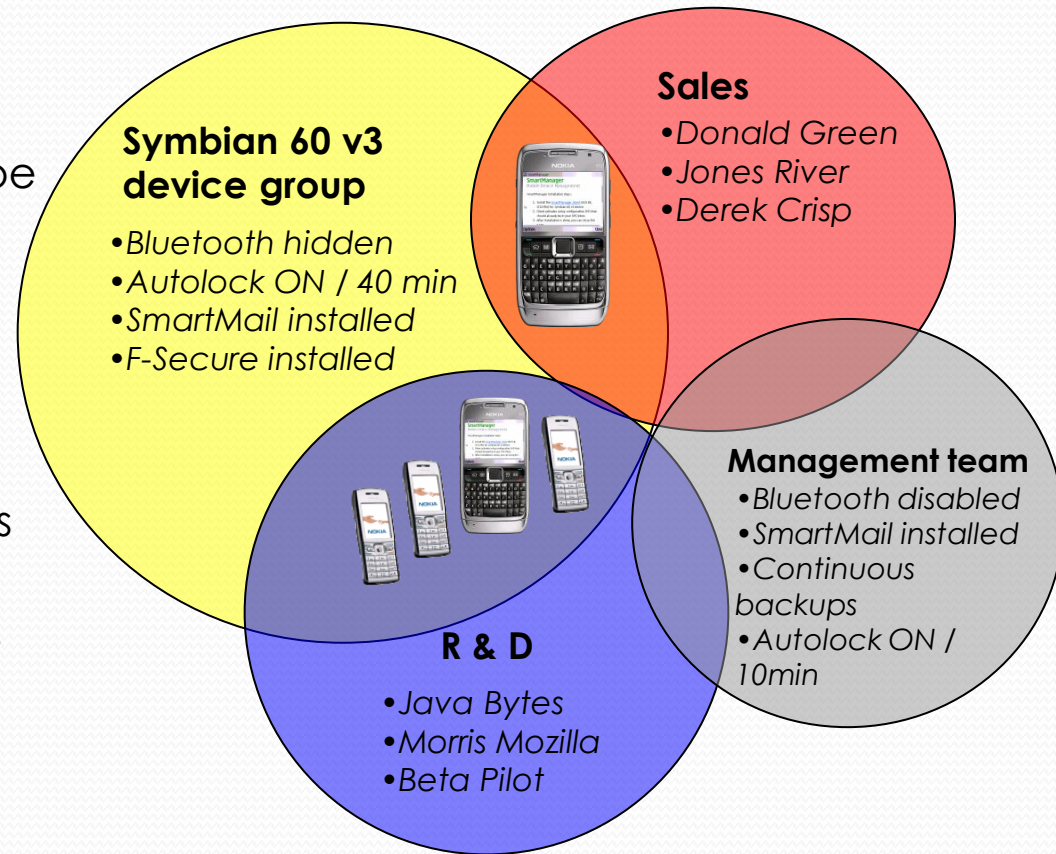

SmartManager™ - actions during device life cycle

- **When taking into use new device**
 - Application installations
 - Access points and e-mail settings can be provisioned and enforced to take in use
- **Executing corporate policies**
 - Applications can be blacklisted
 - Users can be prevented from installing applications
 - Bluetooth management
 - Device autolock management
- **Application updates**
- **Backup and restore**
 - User and program data can be backed up (on schedule) and restored also to a different device types (depending of data & devices)
- **File and certificate management**
- **Device wipe**
 - When needed
 - When SIM-card is changed
- **Data usage monitoring and management**
- **Group communication with SMS-messages**

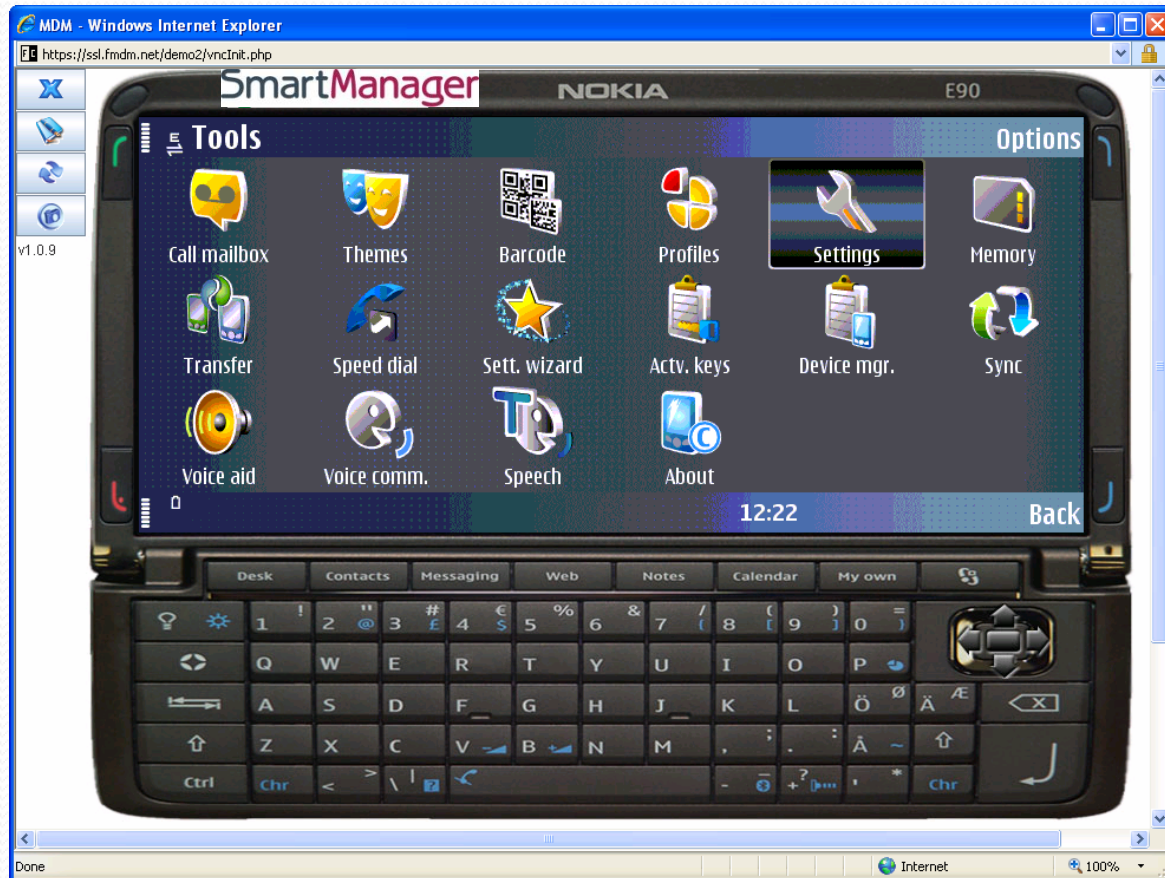

SmartManager™ - Automatic policy management

- Groups can be created in SmartManager web UI
- Group specific requirements can be defined: required applications, settings, scheduled backups and security policies.
- When a new device is placed to a certain group in company **all the defined requirements and policies are automatically executed** for this new device.
- Administrator don't have to define settings manually per device, **standardizing is executed automatically to every device.**

SmartManager™ MDM – Remote Display

Devices can be accessed remotely in order to troubleshoot devices and support end users like never before.

SmartManager's remote access technology is based on VNC secured by SSL and works even over plain narrow bandwidth connections.

* Action requires always end users approval

SmartManager™ - Inventory and reporting
